

Stakeholder Analysis & Engagement Plan

Banking Loan Application & Credit Risk Analytics — Simulated Portfolio Case Study (2023)

1. Stakeholder Identification

The stakeholder map identifies decision makers, process owners, control owners, business users, technical contributors and the Business Analyst. The analysis considers power, interest, impact, information needs and appropriate engagement.

- **Project Sponsor:** Owns business outcomes, priorities and major decisions.
- **Loan Operations Manager:** Owns application-processing workflow and turnaround-time concerns.
- **Credit Manager:** Provides credit-process requirements and validates decision-related reporting.
- **Finance Manager:** Validates KPI definitions and reporting consistency.
- **Risk & Compliance:** Reviews governance, controls, access and auditability requirements.
- **Branch / Sales Teams:** Represent users involved in application intake and status visibility.
- **Data / BI Team:** Translates approved requirements into data models, calculations and dashboards.
- **Business Analyst:** Facilitates elicitation, documents requirements, maintains traceability and coordinates validation.

2. Power / Interest Engagement Model

Segment	Stakeholder Examples	Engagement
High Power / High Interest	Sponsor, Operations, Credit	Manage closely; decisions, workshops and regular reviews
High Power / Medium Interest	Finance, Risk & Compliance	Keep satisfied; targeted reviews and approvals
Medium Power / High Interest	Sales, Data/BI, BA	Collaborate closely; working sessions and demos
Lower direct influence	Supporting users / future consumers	Keep informed through concise updates

3. Elicitation Strategy

- Stakeholder interviews for business goals and pain points
- Process workshops for AS-IS and TO-BE workflow
- KPI definition sessions with Finance and Operations
- Technical walkthroughs with Data/BI
- Dashboard review sessions with business users
- UAT planning with process owners and representative users

4. Communication Plan

Audience	Information	Method	Cadence
Sponsor	Status, risks, decisions	Steering review	Bi-weekly
Operations / Credit	Requirements, process and KPIs	Workshop / review	Weekly
Finance / Risk	KPI and control changes	Review meeting	Bi-weekly / gates
Sales Users	Dashboard and usability updates	Demo / walkthrough	Weekly

Data / BI	Requirements, logic and dependencies	Working session	Weekly
-----------	--------------------------------------	-----------------	--------

5. BA Working Approach

- Document decisions and assumptions immediately after workshops.
- Confirm terminology and KPI definitions with the accountable business owner.
- Maintain an action log for unanswered questions and dependencies.
- Use RACI to clarify accountability before requirement sign-off.
- Maintain traceability from stakeholder need → requirement → user story → UAT.

6. Portfolio Disclosure

This stakeholder analysis is simulated and illustrative. Stakeholders, responsibilities and engagement frequencies are designed to demonstrate BA practice and should not be presented as actual organizational relationships.
