

Project Charter & Business Case

Banking Loan Application & Credit Risk Analytics

Project Type: Simulated Business Analyst Portfolio Case Study

Project Period: 2023 | **Version:** 1.0

1. Executive Summary

A retail bank wants better visibility into its loan application lifecycle, from submission through credit assessment and final decision. The proposed analytics solution standardizes KPIs, identifies process bottlenecks, analyzes approval and rejection patterns, and provides a management reporting framework.

2. Business Problem

- Loan information is spread across operational records and manually prepared reports.
- Management has limited visibility into application volumes, approval rates and processing turnaround time.
- Business teams need consistent definitions for approved, rejected, pending and withdrawn applications.
- Operations teams need to identify stages where applications experience delays.
- Credit and business stakeholders require segmented analysis by loan type, region and customer characteristics.

3. Business Objectives

- Create a standardized analytical view of the loan application lifecycle.
- Measure application volume, approval rate, rejection rate and turnaround time.
- Identify process bottlenecks and operational improvement opportunities.
- Analyze approval/rejection patterns across relevant business dimensions.
- Provide a management dashboard specification for recurring monitoring.
- Establish traceable requirements and UAT scenarios.

4. Scope

In Scope	Out of Scope
Loan application lifecycle analysis	Actual loan underwriting decisions
Application, approval, rejection and pending metrics	Changing bank credit policy
Turnaround-time analysis	Real customer financial advice
Loan type / region / customer-segment analysis	Production banking integration
SQL, Excel and Power BI portfolio analysis	Live customer data

5. Key Stakeholders

- Project Sponsor — ownership, priorities and approvals
- Loan Operations Manager — processing and turnaround time
- Credit Manager — assessment and decision process

- Finance Manager — financial reporting and KPI validation
- Risk / Compliance — governance and controls
- Business Analyst — requirements, process analysis, traceability and UAT
- Data / BI Team — data preparation and dashboard implementation
- Branch / Sales Teams — application intake and feedback

6. Initial Business Requirements

- **BR-001:** Provide a standardized view of loan applications.
- **BR-002:** Report application volume by time period.
- **BR-003:** Calculate approval and rejection rates using documented rules.
- **BR-004:** Provide turnaround-time analysis.
- **BR-005:** Support analysis by loan type and region.
- **BR-006:** Support customer-segment analysis.
- **BR-007:** Identify application-stage bottlenecks.
- **BR-008:** Provide management dashboard requirements.
- **BR-009:** Document and trace KPI definitions.
- **BR-010:** Validate reporting requirements through UAT.

7. Success Measures

- KPI consistency — agreed and documented business definitions
- Reporting coverage — required management KPIs represented
- Traceability — requirements mapped through UAT
- Process visibility — stages and turnaround time measurable
- Usability — dashboard requirements understandable to business users

8. Assumptions & Constraints

- All later project data will be synthetic and contain no real customer information.
- The project demonstrates BA analysis and documentation rather than a production banking implementation.
- Credit-risk analysis is descriptive and analytical; it is not used for real lending decisions.
- Power BI will be demonstrated through specifications, model and DAX rather than a claimed production deployment.

9. Risks & Mitigation

Risk	Mitigation
Inconsistent KPI definitions	Agree business rules early
Incomplete application data	Perform data-quality checks
Changing requirements	Use change-control process
Sensitive banking information	Use synthetic data and security requirements

10. BA Deliverables

- Project Charter & Business Case
- Stakeholder Analysis and RACI
- BRD, FRD and Business Rules
- Requirements Questionnaire
- AS-IS / TO-BE Process and Gap Analysis
- User Stories and Acceptance Criteria
- Requirements Traceability Matrix
- Synthetic dataset, SQL and data dictionary
- Excel analysis and Power BI specification
- UAT test cases and documentation
- Change Request Log and Impact Analysis
- Final Recommendations and Project Closure

11. Approval

Project Sponsor: _____ Date: _____

Business Owner: _____ Date: _____

Business Analyst: _____ Date: _____

Portfolio disclosure: Simulated/illustrative case study for BA portfolio and interview practice. It does not represent a real bank project, production system, customer dataset or actual lending decision process.
