

Business Requirements Document (BRD)

Project

Banking Loan Application & Credit Risk Analytics — Simulated Portfolio Case Study (2023).

1. Business Need

Create a standardized analytical view of the loan application lifecycle so business stakeholders can monitor application volume, decisions, turnaround time, bottlenecks and customer/loan segments.

2. Business Requirements

- BR-001: Provide a standardized view of all in-scope loan applications.
- BR-002: Report application volume by day, month, region and loan type.
- BR-003: Calculate approval, rejection, pending and withdrawal rates using documented definitions.
- BR-004: Measure application turnaround time from submission to decision.
- BR-005: Identify process stages with excessive waiting time.
- BR-006: Support analysis by loan type, region and customer segment.
- BR-007: Provide management-level KPI reporting through an interactive dashboard.
- BR-008: Document KPI definitions, assumptions and calculation rules.
- BR-009: Provide data-quality checks for required analytical fields.
- BR-010: Maintain traceability from business requirements through UAT.

3. Business Questions

- What is the monthly application trend?
- Which loan types have the highest application and rejection volumes?
- Which regions have longer processing times?
- How does approval rate vary by customer and loan segments?
- Which workflow stages create the greatest delays?
- Which KPIs should management monitor regularly?

4. Scope

Application intake through decision reporting, descriptive analytics, process analysis, requirements, dashboard specification and UAT. Production underwriting, live customer data, credit-policy changes and real lending decisions are excluded.

5. Success Criteria

- Business definitions are documented and traceable.
- Required KPIs can be reproduced from the analytical dataset.
- Process bottlenecks can be identified from available timestamps.
- Dashboard requirements cover agreed management questions.
- UAT scenarios trace back to approved requirements.

6. Assumptions & Constraints

- All project data is synthetic.
- Analytics are descriptive and do not make or recommend real lending decisions.
- Source-system integration is outside this portfolio scope.
- Business owners validate definitions before implementation.

7. Approval

Business Sponsor: _____ Business Owner: _____ BA: _____
Date: _____

Portfolio Disclosure

This is simulated/illustrative documentation for portfolio and interview practice and is not evidence of work on a real bank production system.
