

User Stories & Acceptance Criteria

Banking Loan Application & Credit Risk Analytics — Simulated Portfolio Case Study (2023)

User stories translate approved business requirements into user-focused capabilities. Each story is linked to BRD/FRD requirements and has testable acceptance criteria.

US-001 — Loan Operations Manager — Priority: High

Capability: view all in-scope loan applications with consistent status information

User Story: I need a standardized application view so that I can monitor the loan pipeline consistently.

Traceability: BR-001 → FR-001

Acceptance Criteria: Given valid application records, when the user opens the application view, then each record shows a unique application ID and decision status.

US-002 — Operations Manager — Priority: High

Capability: view application volume by month, region and loan type

User Story: I need application-volume trends so that I can identify demand patterns.

Traceability: BR-002 → FR-002

Acceptance Criteria: Given a selected reporting period, when the user selects a month/region/loan type, then application volume reflects the selected filters.

US-003 — Credit Manager — Priority: High

Capability: view approval and rejection rates

User Story: I need standardized decision KPIs so that I can monitor decision patterns using consistent definitions.

Traceability: BR-003 → FR-003; FR-004; FR-005

Acceptance Criteria: Given eligible decided applications, when approval rate is calculated, then approved applications are divided by the documented eligible population.

US-004 — Operations Manager — Priority: High

Capability: analyze turnaround time

User Story: I need turnaround-time metrics so that I can identify processing delays.

Traceability: BR-004 → FR-006

Acceptance Criteria: Given valid submission and decision timestamps, when turnaround time is calculated, then the duration equals decision timestamp minus submission timestamp.

US-005 — Operations Manager — Priority: High

Capability: identify delayed workflow stages

User Story: I need stage-level delay visibility so that I can focus improvement efforts.

Traceability: BR-005 → FR-009

Acceptance Criteria: Given stage timestamps, when the user reviews process performance, then stages with excessive waiting time can be identified using an agreed threshold.

US-006 — Business User — Priority: Medium

Capability: filter analysis by loan type and region

User Story: I need flexible segmentation so that I can compare operational performance.

Traceability: BR-006 → FR-007

Acceptance Criteria: Given a loan type or region filter, when it is applied, then relevant KPIs and visuals update consistently.

US-007 — Business User — Priority: Medium

Capability: analyze customer segments

User Story: I need customer-segment reporting so that I can understand application patterns.

Traceability: BR-006 → FR-008

Acceptance Criteria: Given customer-segment values, when a segment is selected, then application metrics reflect that segment.

US-008 — Project Sponsor — Priority: High

Capability: view executive KPIs in one dashboard

User Story: I need a management dashboard so that I can monitor key loan-process metrics quickly.

Traceability: BR-007 → FR-010; FR-011

Acceptance Criteria: Given dashboard access, when the executive page loads, then required KPI cards and management visuals are available.

US-009 — Finance Manager — Priority: High

Capability: view documented KPI definitions

User Story: I need clear calculation rules so that reports can be reconciled and interpreted consistently.

Traceability: BR-008 → FR-015

Acceptance Criteria: Given a KPI definition document, when Finance reviews a measure, then its numerator, denominator and exclusions are documented.

US-010 — Data / BI Analyst — Priority: High

Capability: validate data-quality exceptions

User Story: I need data-quality checks so that incomplete or invalid records are identified before reporting.

Traceability: BR-009 → FR-014

Acceptance Criteria: Given an invalid or missing required field, when data validation runs, then the record is flagged as a data-quality exception.

US-011 — Business Analyst — Priority: High

Capability: trace requirements to validation scenarios

User Story: I need end-to-end traceability so that every approved requirement can be validated.

Traceability: BR-010 → FR-015

Acceptance Criteria: Given an approved business requirement, when the RTM is reviewed, then it maps to a functional requirement, user story and UAT test.

US-012 — Business User — Priority: Medium

Capability: drill from summary KPIs into analytical dimensions

User Story: I need drill-down capability so that I can investigate unusual KPI movements.

Traceability: BR-007 → FR-012; FR-013

Acceptance Criteria: Given a summary visual, when a supported dimension is selected, then the dashboard provides the defined drill-down or filtered analytical view.

Definition of Ready

- Business value is clear.
- User/role is identified.
- Dependencies and assumptions are known.
- Acceptance criteria are testable.
- Related BRD/FRD requirement is identified.

Definition of Done

- Acceptance criteria are met.
- Requirement traceability is updated.
- Business validation/UAT evidence is available.
- Approved changes are reflected in the story where applicable.
- Documentation is updated.

Portfolio Disclosure

These stories and acceptance criteria are simulated/illustrative for BA portfolio and interview practice.
