

User Acceptance Testing (UAT) Documentation

Banking Loan Application & Credit Risk Analytics — Simulated Portfolio Project | 2023

1. UAT Objective

Validate that the proposed banking loan analytics solution meets the documented business requirements, functional requirements and user stories. UAT focuses on KPI accuracy, filtering, turnaround-time analysis, data quality, dashboard usability and traceability.

2. UAT Scope

In scope: application volumes, approval/rejection/pending measures, turnaround time, loan type and regional analysis, customer segmentation, credit-score-band analysis, dashboard KPIs, data-quality controls, drilldown and requirements traceability. Security/access and refresh checks are included as non-functional validations.

3. Roles

Business Analyst: prepares scenarios, coordinates validation and maintains the RTM. Business/Operations users: validate business behavior and outputs. Data/BI team: supports data, model, refresh and technical fixes. Sponsor/manager: reviews UAT outcome and accepts residual issues.

4. UAT Workflow

Prepare test cases → confirm test data/environment → execute test → record actual result → log defects → retest fixes → summarize results → obtain business sign-off.

5. Entry Criteria

- Requirements and user stories are baselined.
- Test data is available and its synthetic nature is documented.
- Dashboard/model build is available for validation.
- Expected KPI definitions are approved for the exercise.
- Testers have the required access.

6. Exit Criteria

- All critical/high-priority UAT scenarios have an execution result.
- No unresolved critical defects remain for sign-off.
- Failed scenarios have documented defects and retest status.
- RTM coverage is reviewed.
- Business owner records a UAT decision/sign-off.

7. Severity Guidance

Severity	Meaning
Critical	Core business function unavailable or materially incorrect with no practical workaround.
High	Major KPI, calculation, filter or workflow issue affecting business use.
Medium	Important issue with a reasonable workaround or limited impact.
Low	Minor cosmetic, wording or usability issue.

8. UAT Scenario Coverage

Area	Test IDs
Data reconciliation	UAT-001, UAT-010
Trend/date filtering	UAT-002
Decision KPIs	UAT-003, UAT-009, UAT-013
Turnaround time	UAT-004, UAT-005
Segmentation	UAT-006, UAT-007
Dashboard usability	UAT-008, UAT-012
Traceability	UAT-011
Security & refresh	UAT-014, UAT-015

9. UAT Test Case Register

ID	Scenario	Priority	Status
UAT-001	Total application count reconciliation	High	Not Executed
UAT-002	Monthly application trend and date filtering	High	Not Executed
UAT-003	Approval rate calculation	High	Not Executed
UAT-004	Turnaround time calculation	High	Not Executed
UAT-005	Stage bottleneck visibility	Medium	Not Executed
UAT-006	Loan type and region filters	High	Not Executed
UAT-007	Customer segment analysis	Medium	Not Executed
UAT-008	Executive dashboard KPI visibility	High	Not Executed
UAT-009	KPI definition and reconciliation	High	Not Executed
UAT-010	Data-quality exception validation	High	Not Executed
UAT-011	Requirements traceability validation	High	Not Executed
UAT-012	Dashboard drilldown	Medium	Not Executed
UAT-013	Pending application analysis	High	Not Executed
UAT-014	Access and security validation	High	Not Executed
UAT-015	Reporting period and refresh validation	Medium	Not Executed

10. Sign-Off Template

Role	Name	Decision	Date	Signature
Business Owner				
Business/Operations Tester				
Business Analyst				
BI/Data Representative				

11. BA Interview Talking Point

“I converted the requirements and user stories into a traceable UAT pack. I defined expected KPI calculations, reconciliation checks, filtering scenarios, data-quality validation, drilldown, access and refresh checks. I would execute these with business users, log defects, coordinate retesting and obtain sign-off. The portfolio version intentionally leaves execution results blank rather than claiming testing that was not performed.”

12. Portfolio Disclosure

This is a simulated/illustrative Business Analyst portfolio project created for learning, GitHub presentation and interview preparation. The dataset, stakeholders, requirements and UAT scenarios are not presented as evidence of work performed for a real bank or customer.
