

Data Dictionary & SQL Analysis Guide

Banking Loan Application & Credit Risk Analytics — Synthetic Dataset (2023)

The dataset contains 500 synthetic loan application records created for portfolio analysis. No real customer information is used.

Data Dictionary

Field	Type	Description
application_id	Text	Unique synthetic loan application identifier
application_date	Date	Date the application was submitted
submission_date	Date	Analytical submission timestamp/date
decision_date	Date	Date of final decision; blank for pending applications
region	Text	Business region
loan_type	Text	Type of loan requested
customer_segment	Text	Synthetic customer segment
channel	Text	Application intake channel
requested_amount	Numeric	Requested loan amount
credit_score_band	Text	Synthetic credit-score range
decision_status	Text	Approved, Rejected, Pending or Withdrawn
documents_complete	Text	Whether required documents are complete
application_stage	Text	Current / recorded lifecycle stage
processing_days	Numeric	Days between submission and decision
risk_flag	Text	Analytical flag for selected synthetic patterns

SQL Analysis Coverage

- Overall application KPIs
- Monthly application trend
- Loan-type approval/rejection analysis
- Regional performance
- Average and median turnaround time
- Credit-score-band analysis
- Channel and customer-segment analysis
- Pending-application analysis
- Data-quality validation

Analytical Limitation

Credit-score bands and risk flags are synthetic attributes created solely to demonstrate descriptive analytics. They must not be interpreted as a real credit-risk model or used for lending decisions.

Portfolio Disclosure

This dataset and SQL are simulated/illustrative and are not derived from a real bank or real customer records.
